IT ENGINEERING

Project: ELCT :: Care2x
Type (E, C, N)[1]: E
Reference Number: 16

Error: Direct Link
 	
Short Description: Not logical process e.g. if you look for immunizations
 	
Full Description:
Go following way: Person->Immunization->*search a person and select it*-> now you are at the person registration and to get the immunization module you have to click it on the right hand sites link „Immunization" again.
These are not working at all.
 	
Implementation Remarks:
Check up if it's still a problem in the latest release. If yes, use a flag handled by session variable that shows what target should be directly pointed after the user has a person selected.
In the patient.php, section "Prepare the submenu links indexed with their template tags" line 70 you'll find the links. Look carefully for the appended URL settings at the end of the script. If you following e.g. the way of 'appointments' you will linked to "patient_register_pass.php" with the urlappend "&target=search&retpath=docs" (here you should also the target…)
How is the following flow chart through the care2x?
At patent_register_pass.php you'll reach switch selection and fall into case 'search'. Here will be defined the forwarded file. It's a little false friend, because at the first fiew you didn't find this value at these script again. But take care about the line:
if ($pass=='check')
      include($root_path.'include/inc_passcheck.php');
Check inc_passcheck.php. In this file you'll find the forwarding script element:
header('Location:'.strtr($fileforward,' ','+').'&checkintern='.$checkintern);
Note: The append parameter dissaper at this file. Also the append parameter has no value that shows the main target. This will help…
 	
Will be realized by: MEROTECH
Estimated Realization: 0,25 day
Needed till: 1st of February
